

Thailand's Effort to achieve a people-centered health information system in universal health coverage scheme

- Ms.Siripan Muangsin
- Director, Bureau of Insurance Information Technology
- National Health Security Office, Thailand
- 19 September 2018

Acknowledgment

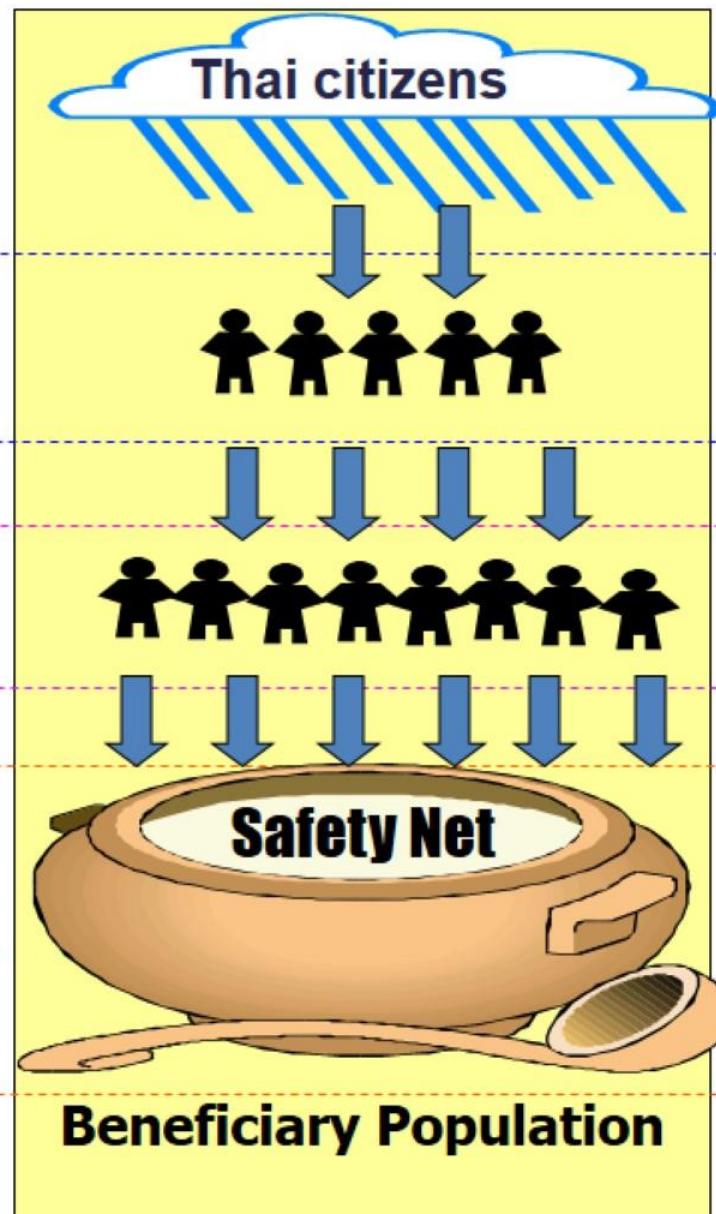

I would like to express my sincere thanks to my former Deputy secretary general, Mrs. Netnapis Suchonvanich for her invaluable settle and constant encouragement throughout this success.

NHSO IT system would not have achieved this far and would not have been completed without all the support that we have received from her.

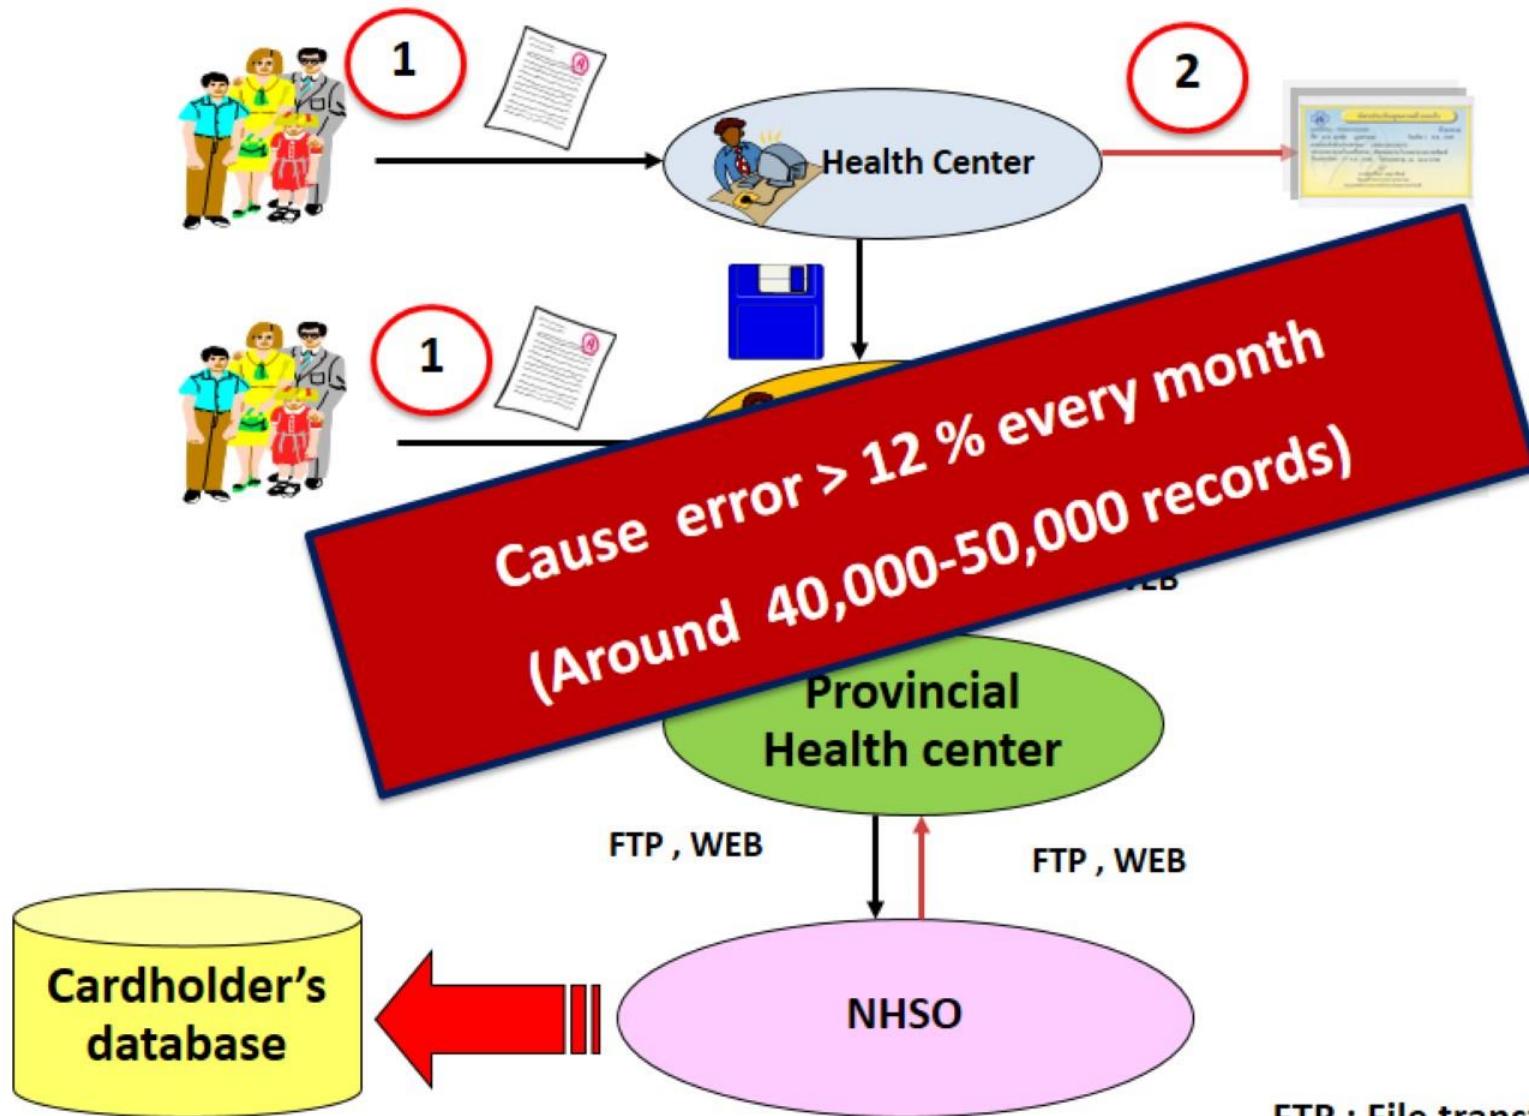

Thank You

Main public health insurance schemes in Thailand >> Inclusive policy and social safety-net

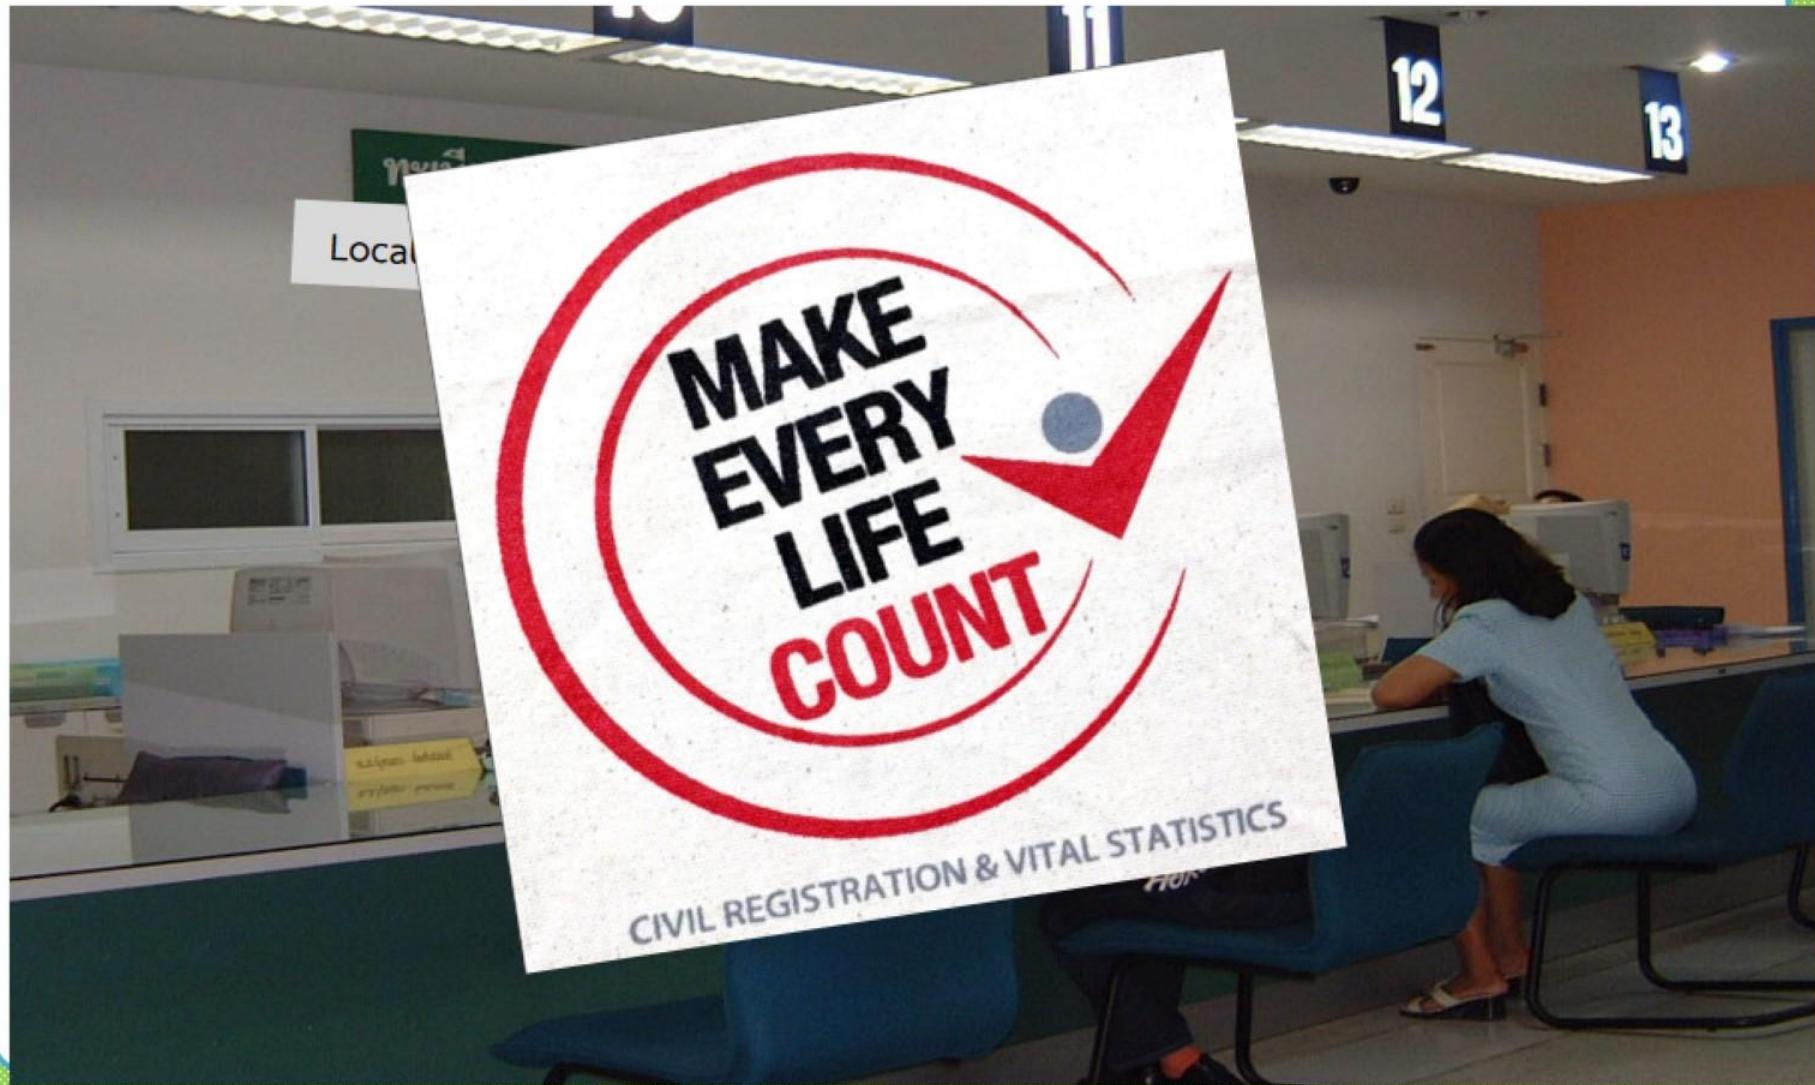

UC enrollment system

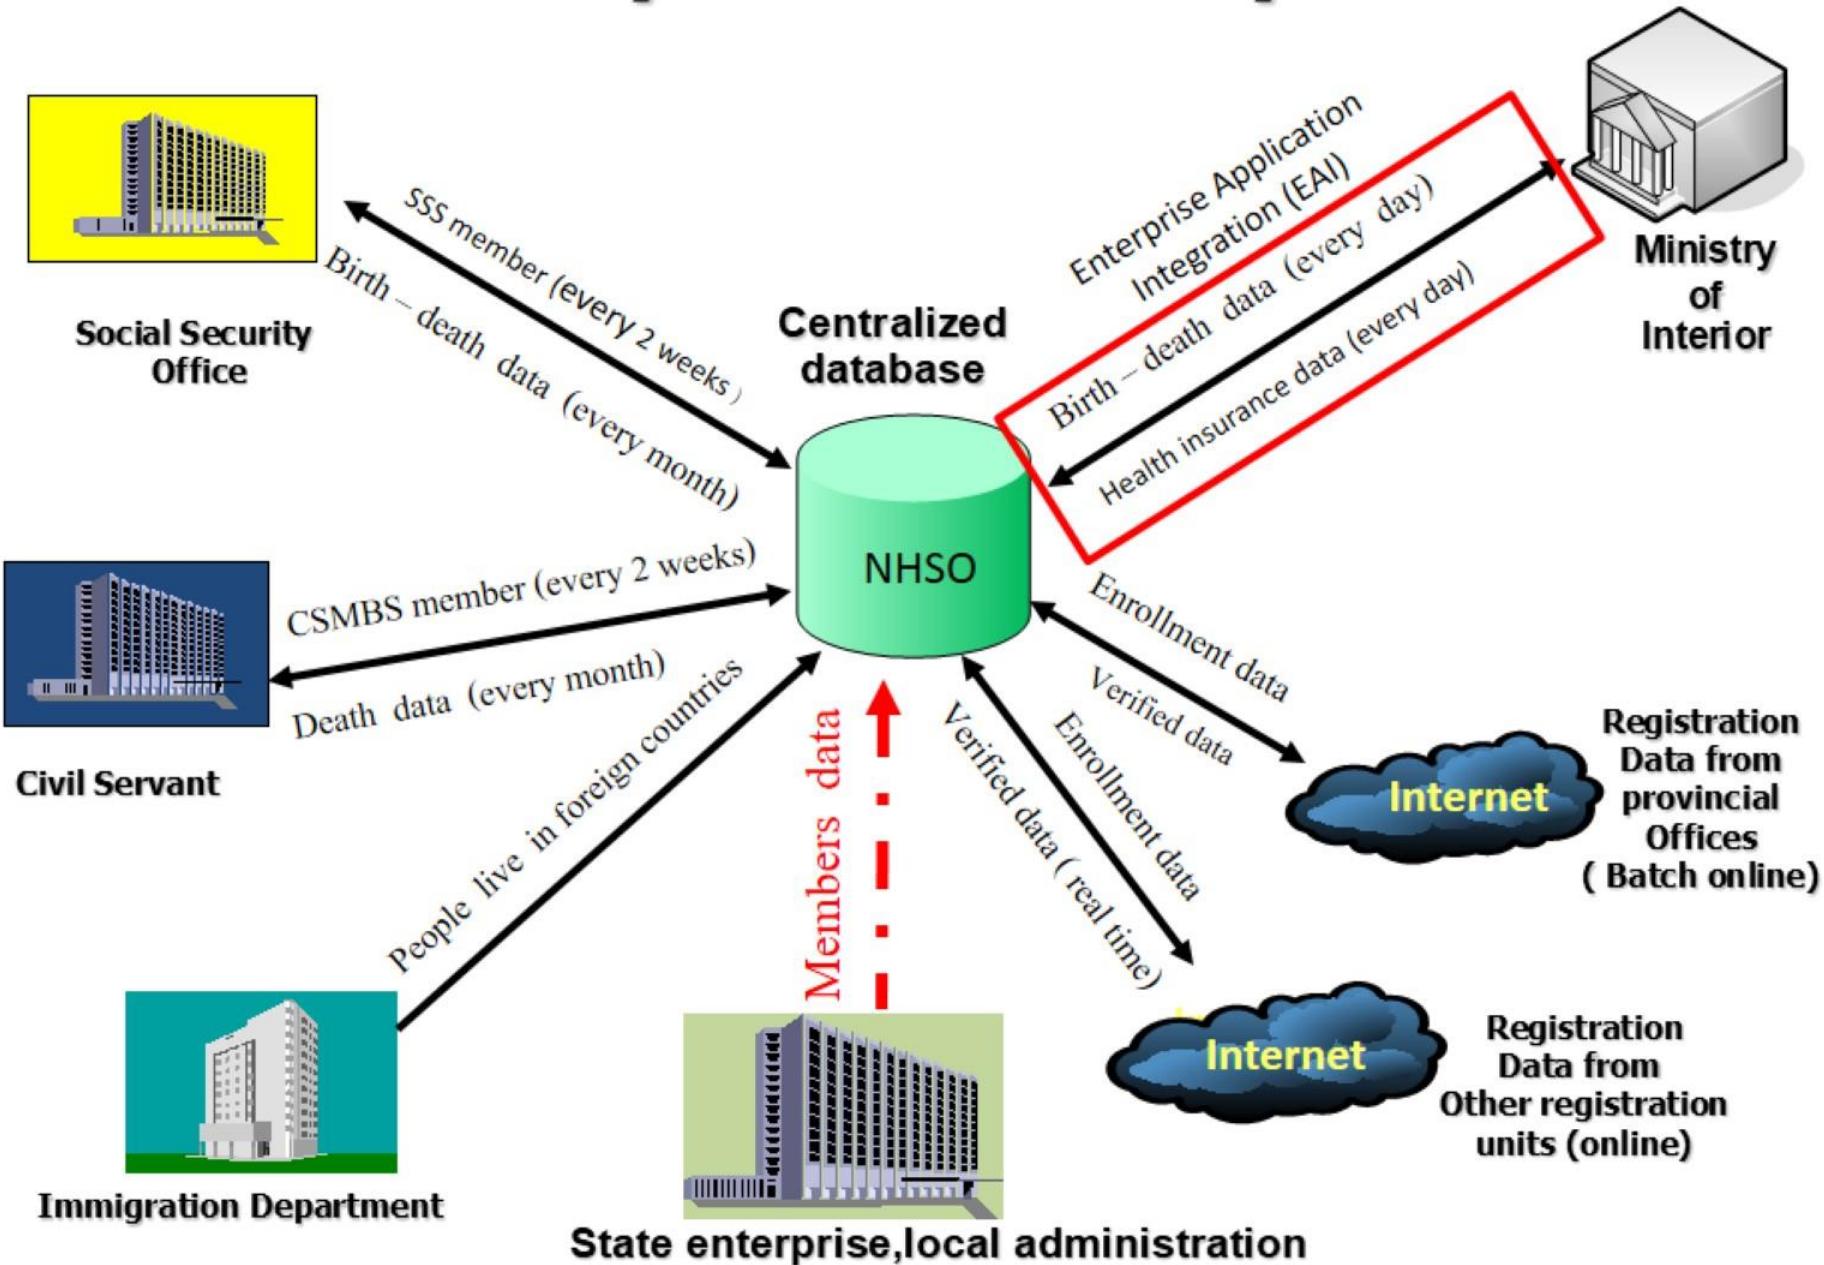

(former system)

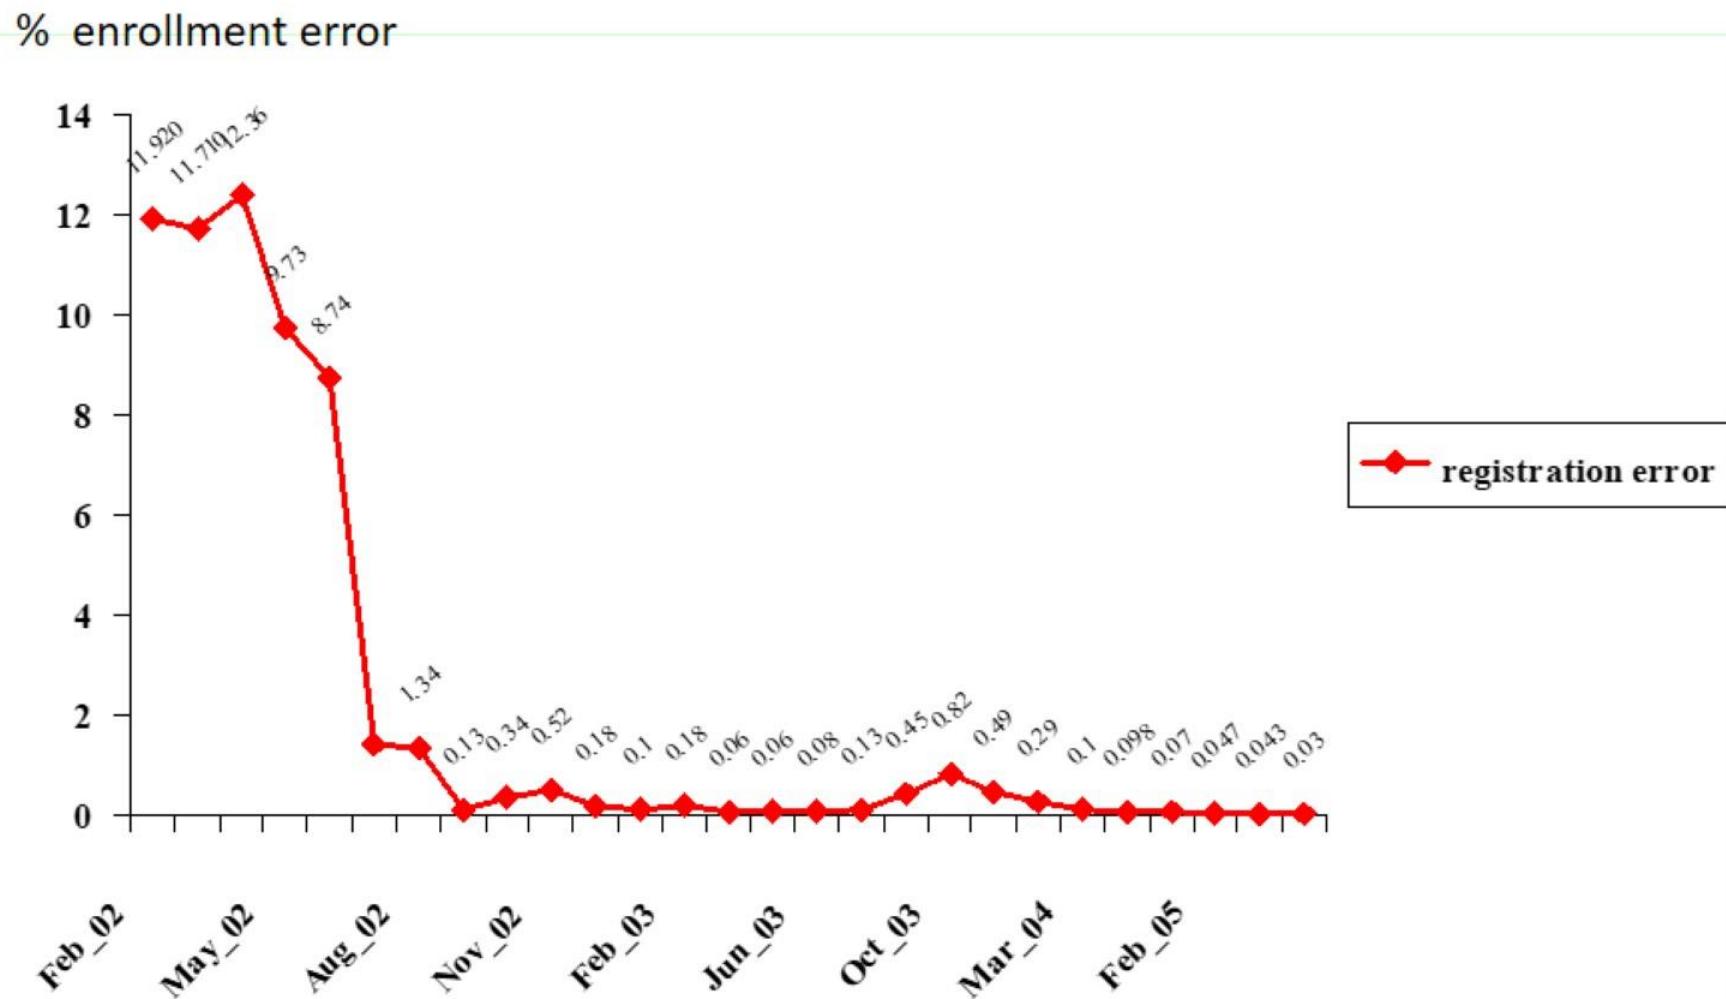

First effort :
using unique PID to develop data exchange with ministry of interior

Beneficiary enrollment System

Decrease in beneficiary enrollment errors from 2002-2005

from UC card to National ID card

In 2008

Move forward to Birth registry project

in 2011

- With the collaboration among the Ministry of interior (MOI), UNICEF, MOPH and NHSO were taken place for establishing of birth registry by linking the birth data from hospital's delivery room to MOI's database. So, the preparation for generating the national ID and birth certificate for newborn can be processed and return the result back to the hospitals for UC enrollment system automatically.

MOI

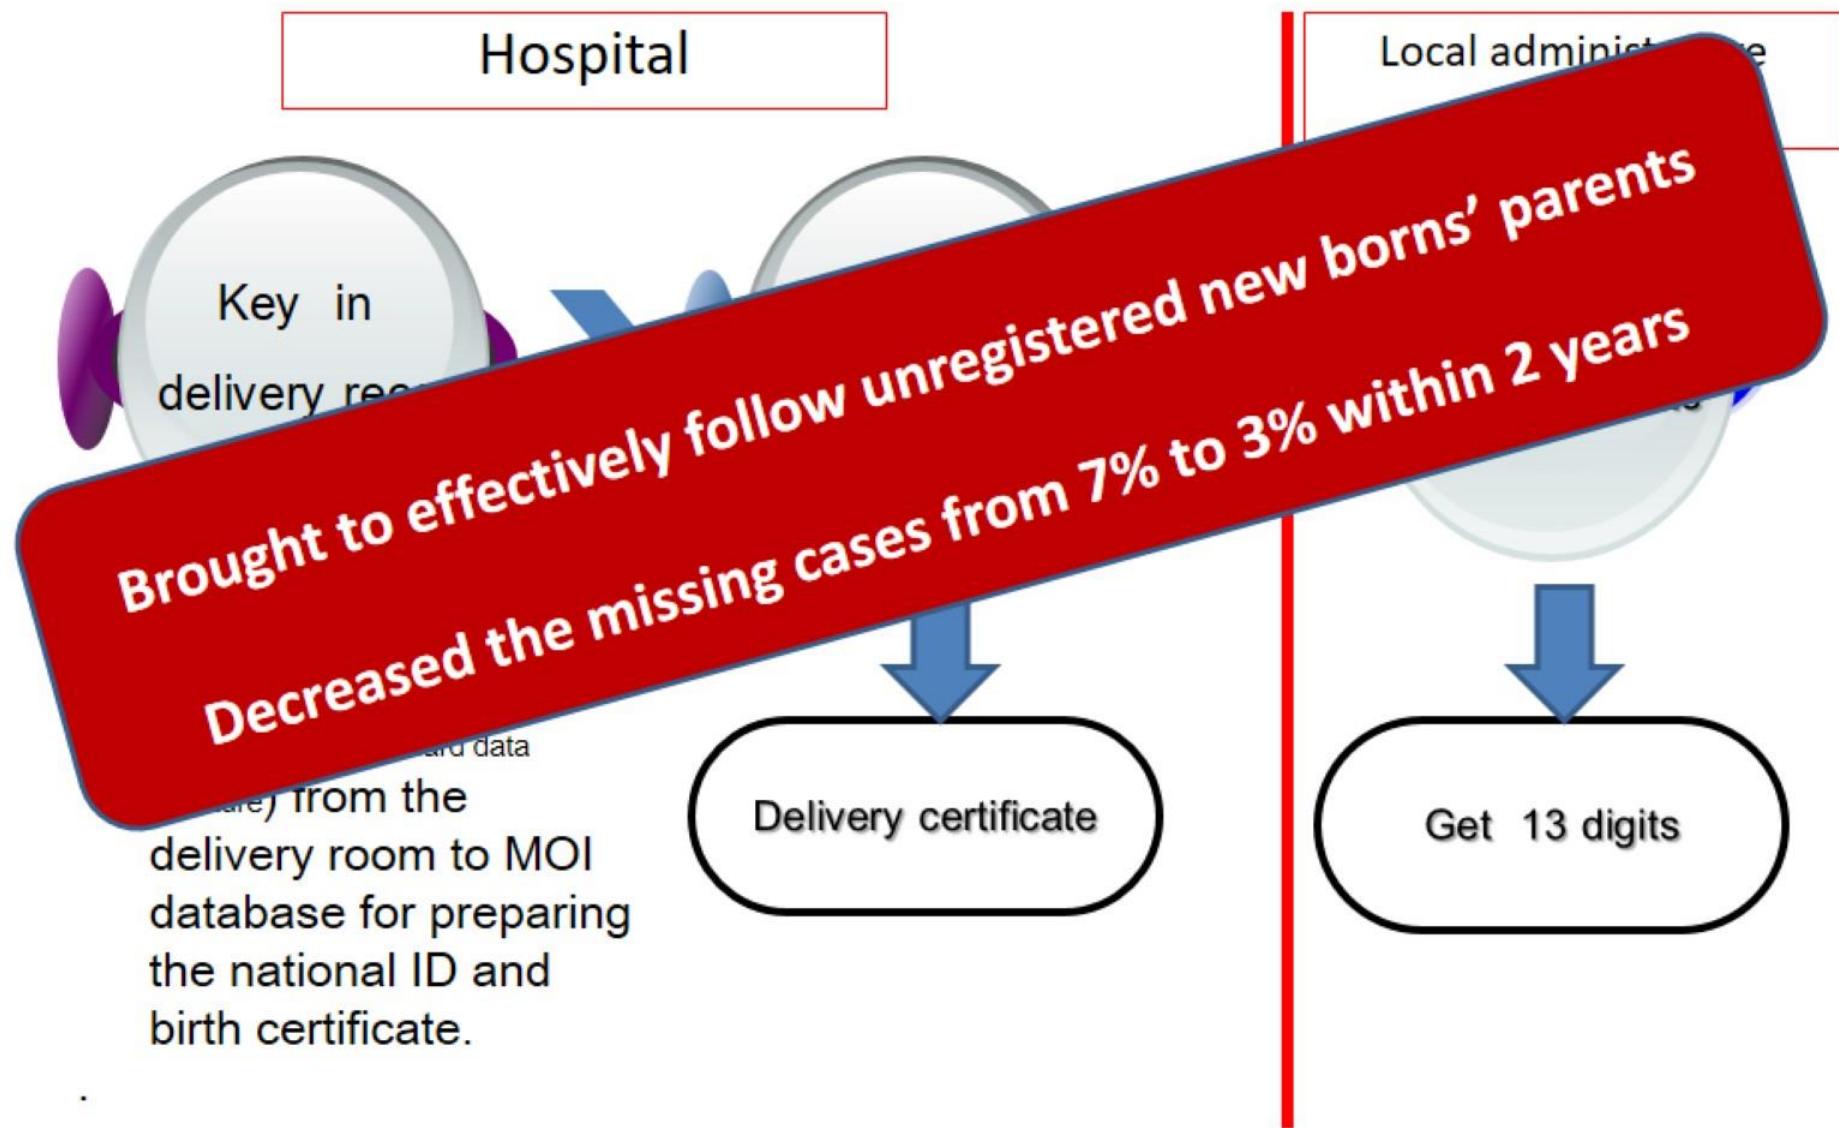

MOPH

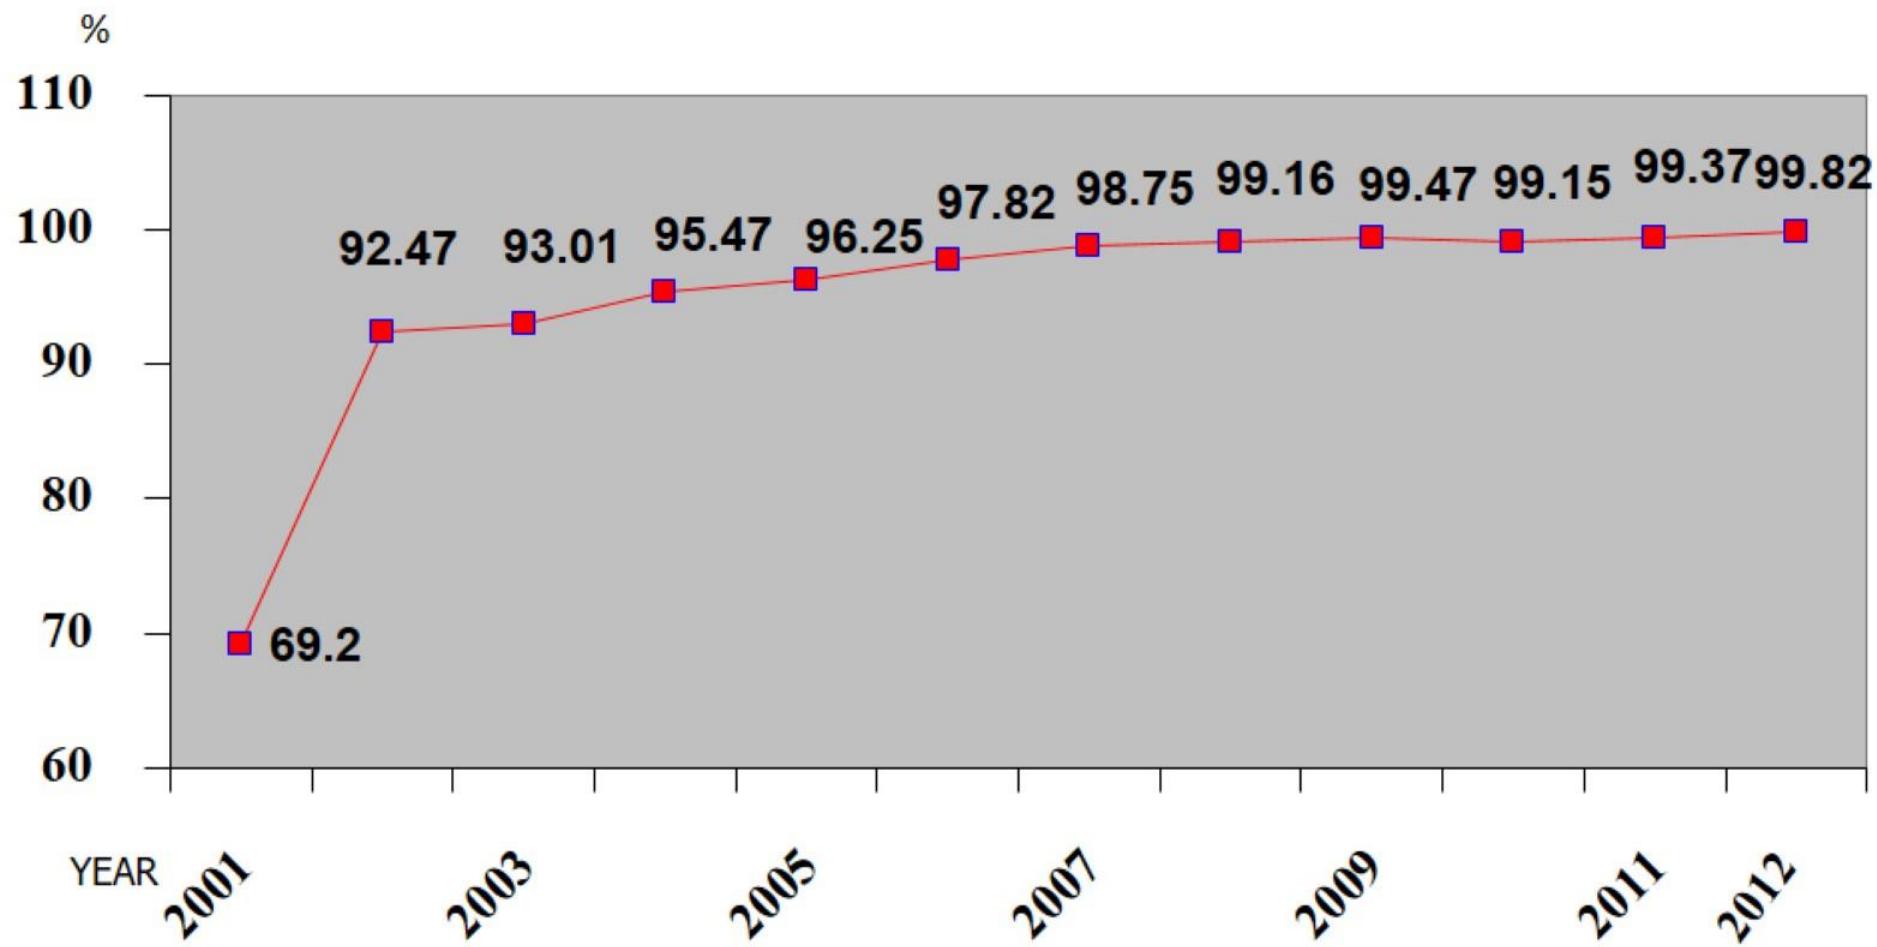

National Health Security Office

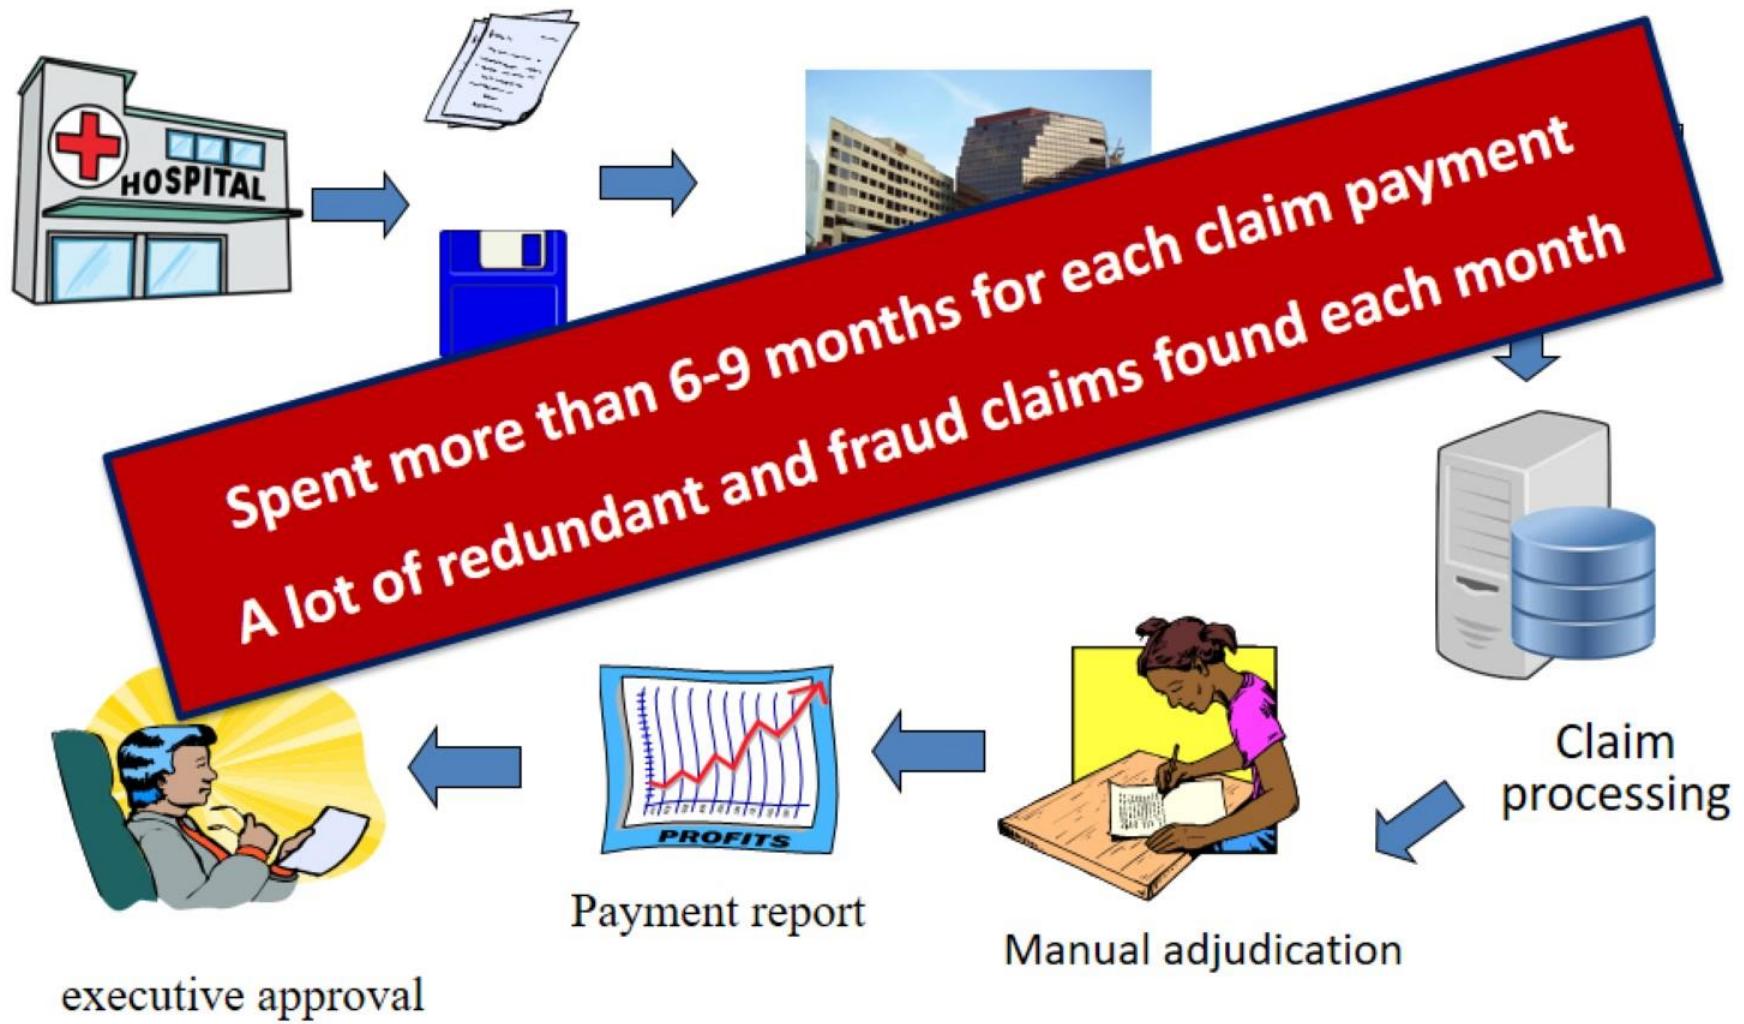

Process of online birth registry

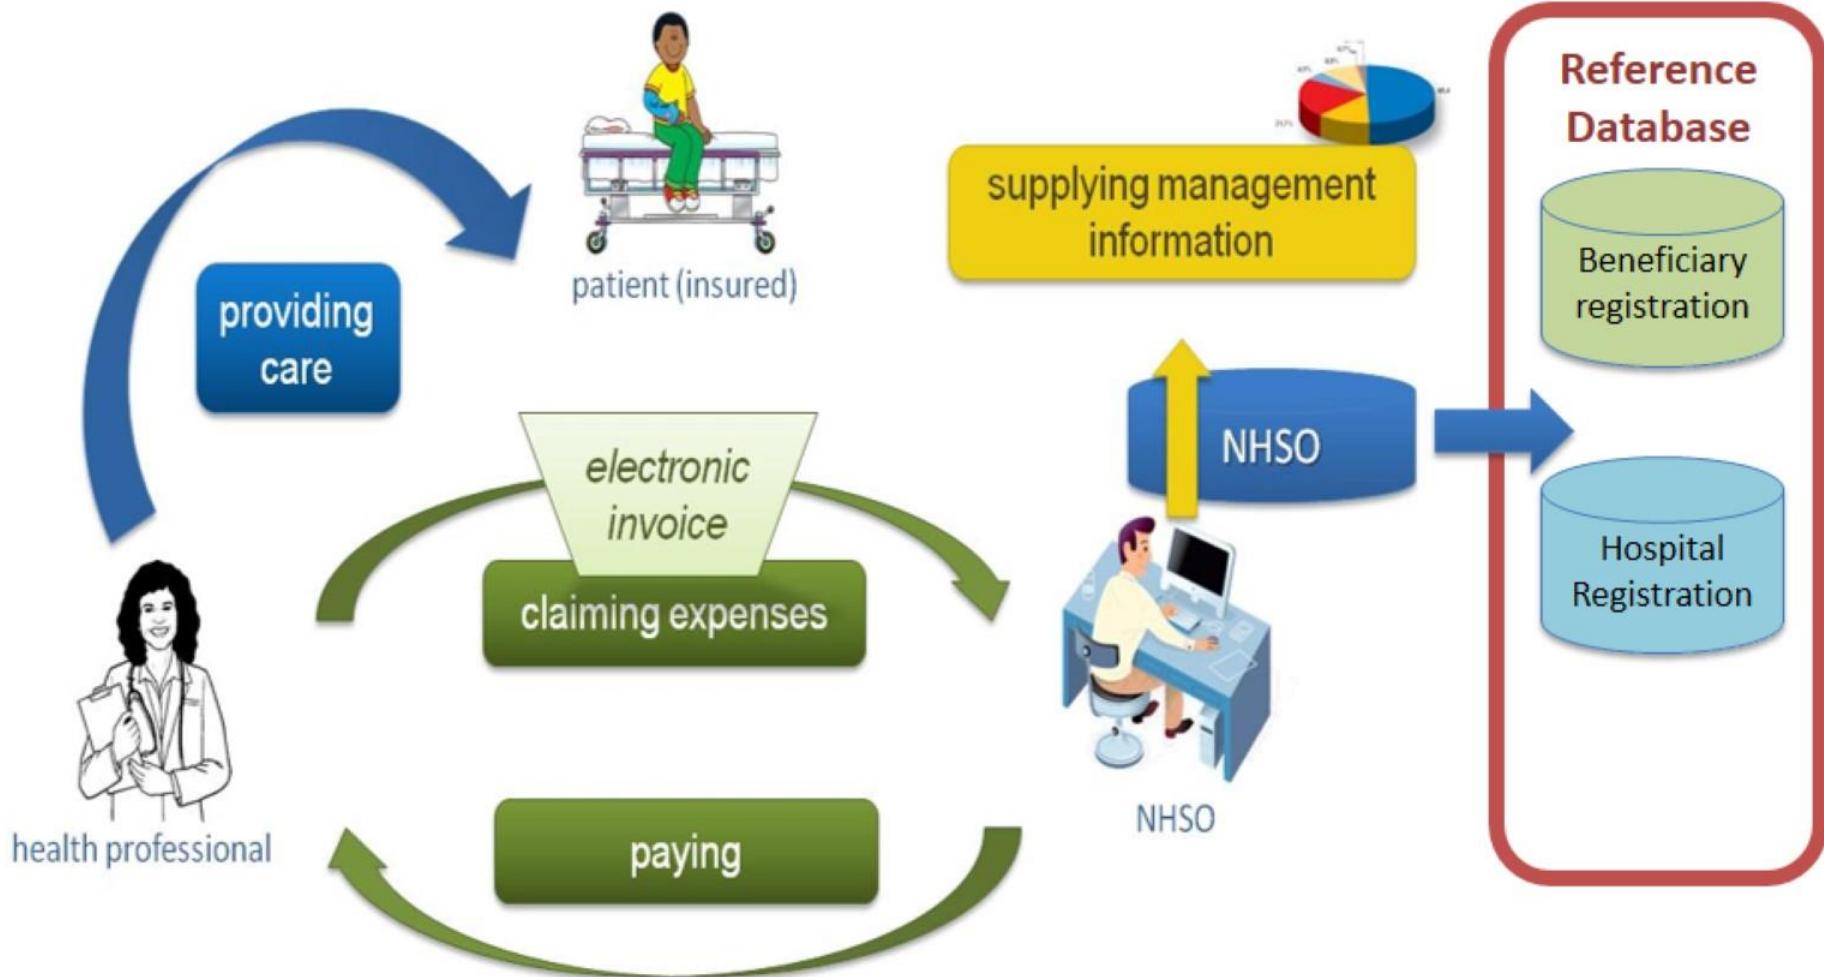

The Development of UC Coverage

Claim system in 2002

Second effort : Reform all paper claims to Electronic-Claims in 2009

Health Service Provider

Data Validation

Encryption

NHSO

Decryption

Medical Record Database

- Scheme Verification
- DRG Grouping, Data Validation
- Deny, Warning, Report

(approx. IP : 5,500,000 records/year
OP(HC,AE) : 600,000 records/year)

Relative weight (RW) or Points

Reimbursement Database

- Verification according to Payment Rules
- How much to reimburse ?
- Reports on website

Move forward to
a people-centered health information system
using Big Data Technology in National Health Insurance
individual medical record

NHSO Current System

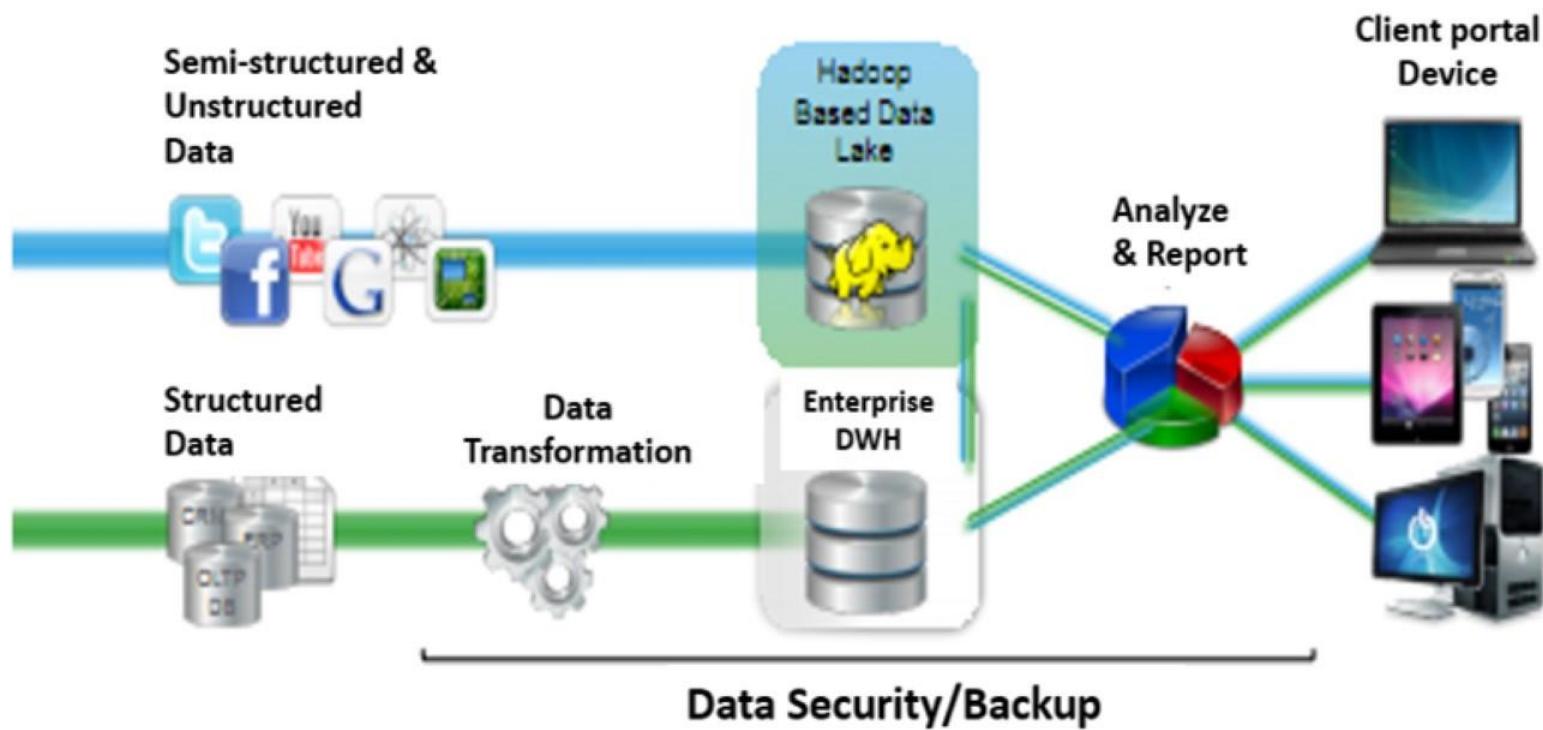

Key Differences Between the Data Lake and Data Warehouse

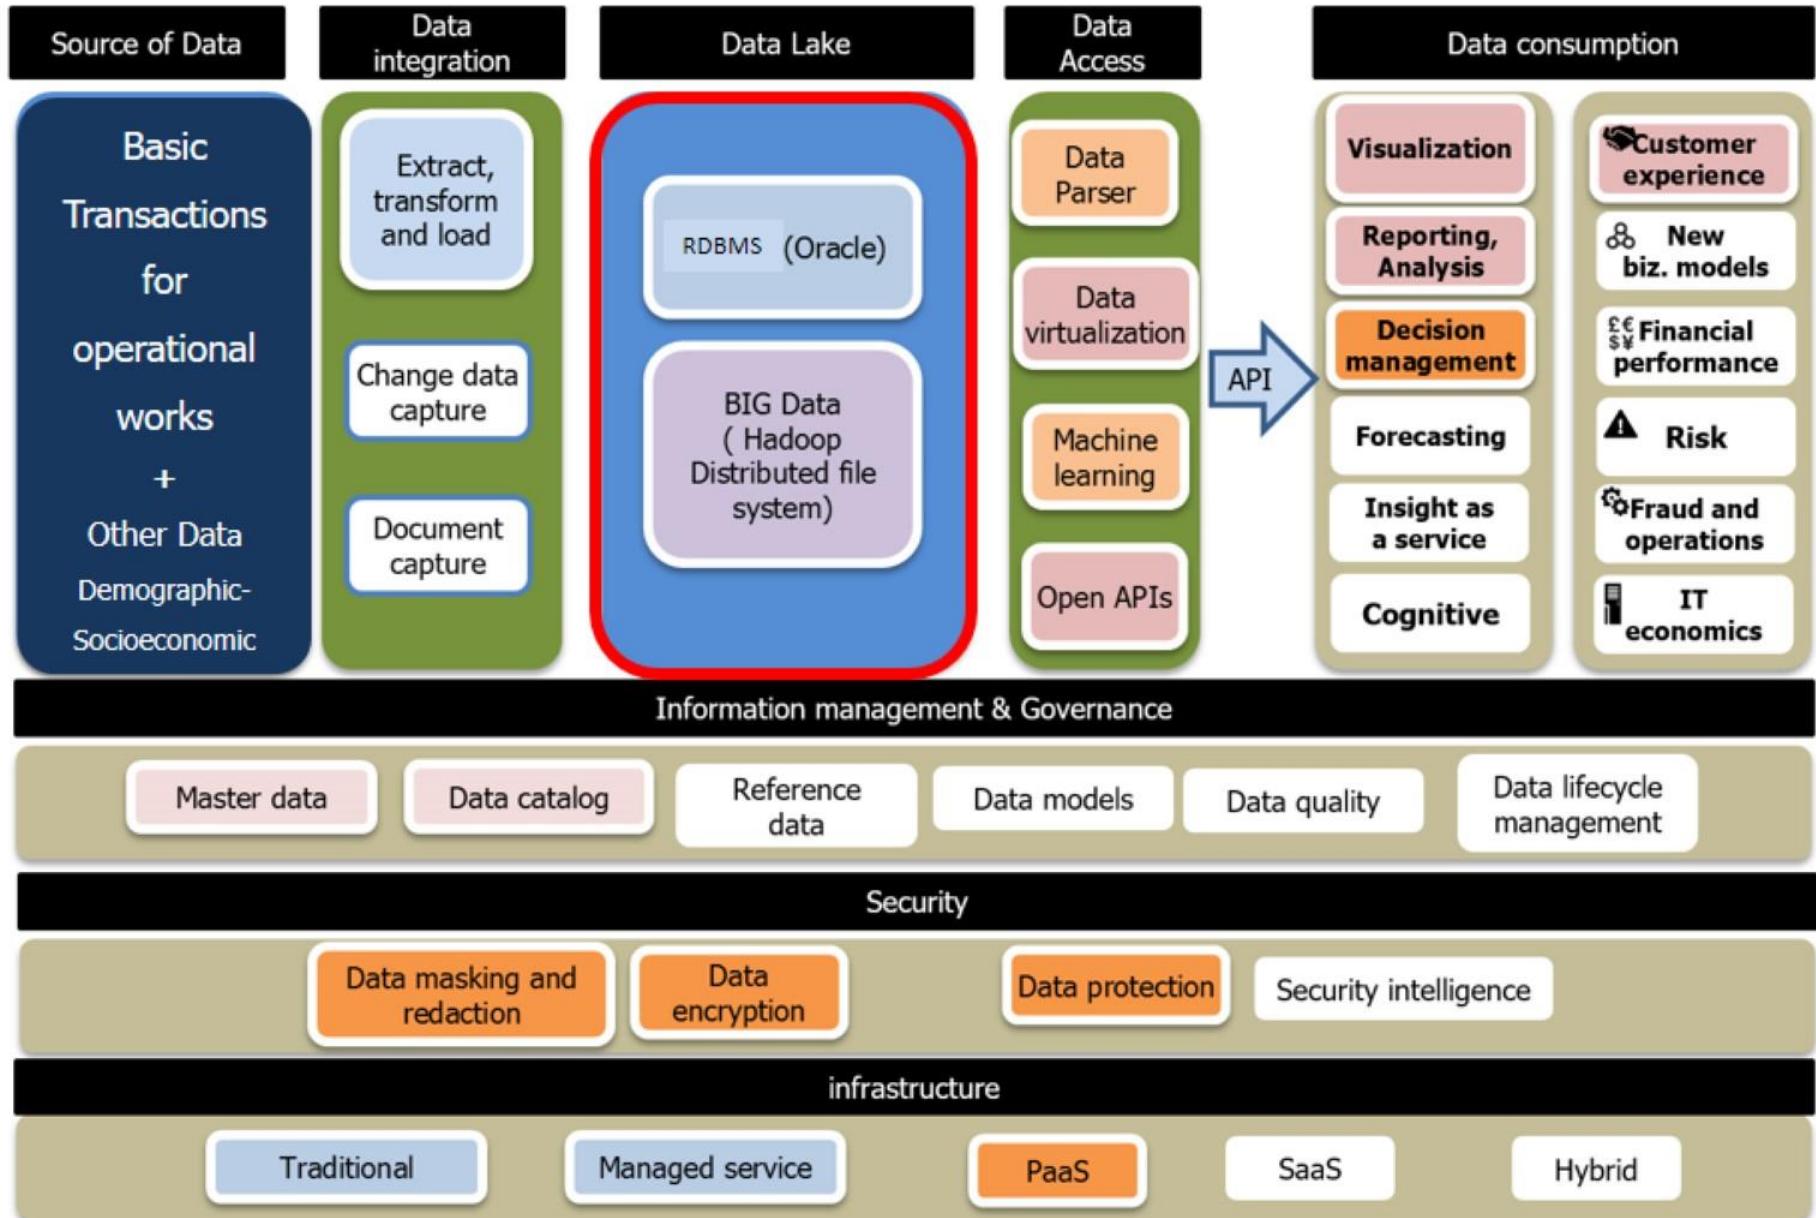

DATA WAREHOUSE	vs.	DATA LAKE
Structured, processed	DATA	Structured/semi-structured/unstructured/raw
Schema-on-write	PROCESSING	Schema-on-read
Expensive for large data volumes	STORAGE	Designed for low-cost storage
Less agile, fixed configuration	AGILITY	Highly agile, configure and reconfigure as needed
Mature	SECURITY	Maturing
Business pros	USERS	Data scientists et al.

Data Lakes model for success

Integration and collaboration between current and future state.

New design for people centered health information system

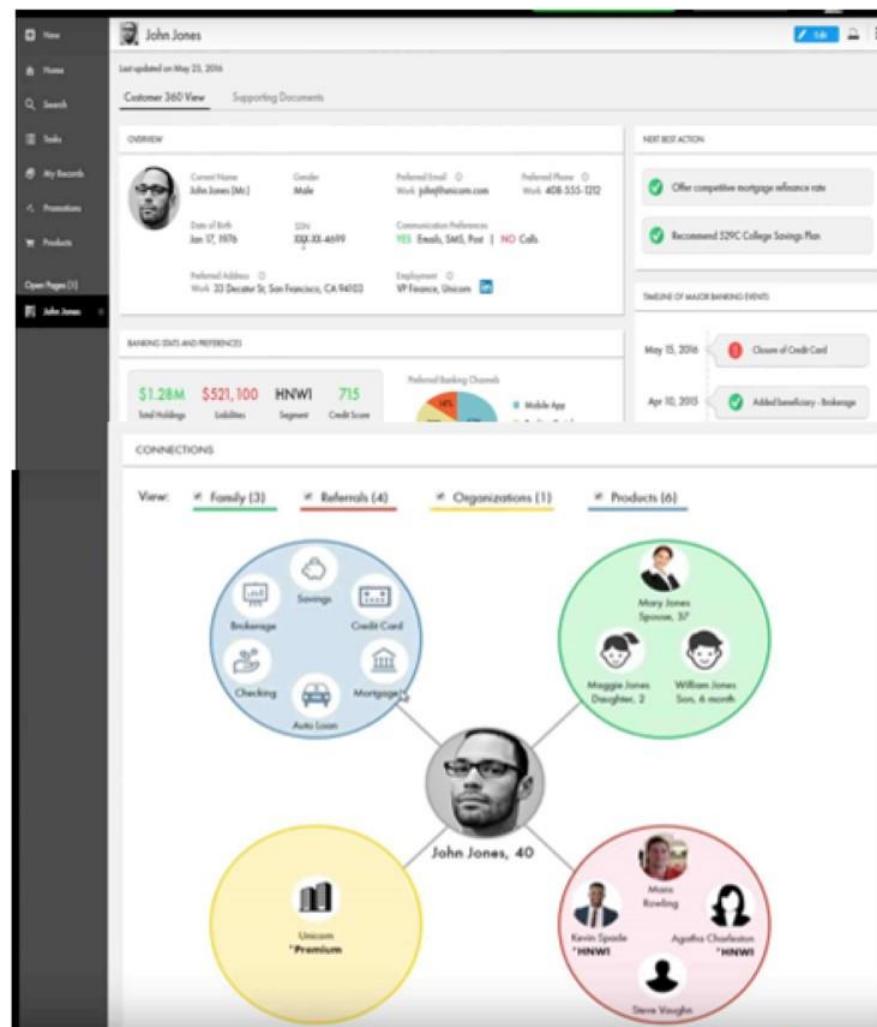

**Basic Information
(Name(s),
Aliases, DOB,
Gender)**

**Contact Information
(eMail,
Phone,
